

AICAR

AMPK Activator

Metabolic Enhancer · Endurance · Fat Loss

What Is AICAR?

AICAR (5-Aminoimidazole-4-carboxamide ribonucleotide) is a research compound that activates AMPK (AMP-activated protein kinase), mimicking the metabolic effects of exercise.

How It Works

AMPK Activation	Exercise Mimetic	Metabolic Regulation
Boosts cellular energy sensing and fat oxidation.	Increases mitochondrial biogenesis and endurance capacity.	Improves glucose uptake and lipid metabolism.

Areas of Research Interest

- Enhanced endurance and energy production
- Fat loss and improved body composition
- Better glucose metabolism
- Mitochondrial health
- Potential longevity benefits

Common Research Approaches

Studied via injection or oral routes in metabolic and performance research. Often explored as an “exercise mimetic” compound.
