

DSIP

Delta Sleep-Inducing Peptide

Sleep Regulation · Stress Reduction · Recovery

What Is DSIP?

DSIP (Delta Sleep-Inducing Peptide) is a neuropeptide studied for its potential role in promoting deep (delta) sleep, regulating circadian rhythms, and modulating stress responses.

How It Works

Sleep Promotion	Stress Modulation	Pain & Recovery
May increase slow-wave (delta) sleep and improve sleep efficiency.	Helps normalize cortisol and adapt to stress.	Studied for analgesic effects and support in withdrawal/pain management.

Areas of Research Interest

- Improved sleep quality and latency
- Reduced stress and anxiety
- Potential pain relief
- Support for insomnia and sleep disorders
- Enhanced recovery and well-being

Common Research Approaches

Investigated via injection in sleep and stress-related studies. Often researched for its non-sedating effects on natural sleep architecture.
