

EPITHALON (EPITALON)

Telomerase Activator

Longevity · Anti-Aging · Pineal Support

What Is Epithalon?

Epithalon (Epitalon) is a synthetic tetrapeptide (Ala-Glu-Asp-Gly) derived from epithalamin. It is researched for its ability to activate telomerase and extend telomeres, supporting cellular longevity.

How It Works

Telomerase Activation Increases telomerase activity to maintain telomere length.	Pineal Gland Support Regulates melatonin and circadian rhythms.	Anti-Aging Effects Reduces oxidative stress and promotes DNA repair.

Areas of Research Interest

- Cellular longevity and telomere protection
- Improved sleep and circadian rhythm
- Enhanced immune function
- Anti-aging and lifespan extension
- Overall vitality and healthspan

Common Research Approaches

Subcutaneous injection in cycles for longevity and anti-aging research. Often combined with other peptides.
