

GLUTATHIONE

Master Antioxidant

Detox · Immune Support · Cellular Protection

What Is Glutathione?

Glutathione is a powerful tripeptide antioxidant (made of cysteine, glycine, and glutamate) naturally produced in the body, especially in the liver. It is often called the “master antioxidant” for its central role in cellular defense.

How It Works

Antioxidant Defense Neutralizes free radicals, peroxides, and oxidative stress.	Detoxification Binds to toxins and heavy metals for elimination via liver pathways.
Immune Modulation Supports white blood cell function and overall immune response.	Regeneration Recycles other antioxidants like vitamins C and E.

Areas of Research Interest

- Powerful cellular protection and anti-aging
- Liver detox and heavy metal chelation
- Immune system support
- Skin health and brightening
- Reduced oxidative stress and inflammation
- Support for metabolic and neurological health

Common Research Approaches

Studied in IV, oral, or topical forms. Levels can be supported through precursors (e.g., NAC), lifestyle, and direct supplementation in research settings.

FOR RESEARCH PURPOSES ONLY · NOT FOR HUMAN CONSUMPTION
