

KISSPEPTIN-10

Reproductive Peptide

Hormone Regulation · Fertility · Libido

What Is Kisspeptin-10?

Kisspeptin-10 is a potent decapeptide that stimulates the release of gonadotropin-releasing hormone (GnRH), playing a central role in the hypothalamic-pituitary-gonadal axis.

How It Works

GnRH Stimulation	Hormone Balance	Reproductive Effects
Triggers luteinizing hormone (LH) and follicle-stimulating hormone (FSH) release.	Regulates testosterone and estrogen production.	Supports fertility, ovulation, and libido pathways.

Areas of Research Interest

- Fertility and reproductive health
- Hormone optimization (testosterone/estrogen)
- Libido and sexual function
- Hypogonadism support
- Puberty and menstrual cycle regulation

Common Research Approaches

Subcutaneous or intravenous in studies focused on reproductive endocrinology and hormone therapy.
