

OXYTOCIN

Bonding & Social Peptide

Trust · Empathy · Social Behavior

What Is Oxytocin?

Oxytocin is a nine-amino acid peptide hormone and neuropeptide produced in the hypothalamus. It is known as the “love hormone” for its role in social bonding, trust, and emotional connection.

How It Works

Social Bonding	Stress Reduction	Reproductive Effects
Enhances trust, empathy, and pair bonding.	Lowers cortisol and promotes calm in social situations.	Facilitates labor, milk ejection, and maternal behavior.

Areas of Research Interest

- Social anxiety and autism spectrum
- Relationship and trust enhancement
- Emotional regulation and empathy
- Postpartum and maternal bonding
- Potential pain and stress relief

Common Research Approaches

Intranasal spray for central nervous system effects. Researched in psychology, psychiatry, and social neuroscience.
