

SS-31 (ELAMIPRETIDE)

Mitochondria-Targeted Peptide

Energy · Cardioprotection · Anti-Aging

What Is SS-31?

SS-31 (Elamipretide) is a cell-permeable, mitochondria-targeting tetrapeptide designed to protect and optimize mitochondrial function by reducing oxidative stress.

How It Works

Mitochondrial Penetration	Cardiolipin Stabilization	Energy Optimization
Accumulates in the inner mitochondrial membrane.	Reduces ROS production and improves electron transport chain efficiency.	Enhances ATP production and cellular resilience.

Areas of Research Interest

- Improved mitochondrial function and energy
- Cardioprotection and heart health
- Reduced oxidative stress
- Neuroprotection and kidney support
- Potential anti-aging applications

Common Research Approaches

Subcutaneous injection in studies focused on mitochondrial diseases, heart failure, and age-related decline.
