

SEMAX + SELANK + DIHEXA

Nasal Nootropic Stack

Cognitive Enhancement · Neuroprotection · Brain Repair · Use as Needed

What Is This Stack?

The combination of Semax, Selank, and Dihexa is a synergistic nootropic stack researched for cognitive performance, anxiety reduction, stress resilience, and neuronal support. It is typically administered intranasally for direct central nervous system delivery and is commonly used on an as-needed basis rather than a fixed daily injection schedule.

How It Works

Semax	Selank	Dihexa
Enhances BDNF and NGF, supporting focus, memory, learning, and neuroprotection.	Provides anxiolytic effects, immune modulation, and improved stress resilience without sedation.	Potent neurotrophic factor that promotes synapse formation and supports brain repair pathways.

Areas of Research Interest

- Comprehensive cognitive enhancement (focus, memory, learning)
- Reduced anxiety and improved mood stability
- Stress resilience and mental clarity under pressure
- Neuroprotection and support for brain repair / neurogenesis
- Overall mental performance and resilience

Administration & Use

This stack is designed for **intranasal administration** for direct brain delivery. It is commonly used **as needed** rather than on a rigid fixed schedule.

- Route: Intranasal (nasal spray or drops)
- Timing: Morning or as needed throughout the day
- Frequency: Use as needed for cognitive or stress support
- Storage: Follow product label (typically cool, protected from light)
- Always follow the specific dosing directions on the product label

Key Point: Use as Needed

Unlike fixed daily injectable peptides, the Semax/Selank/Dihexa nasal stack is typically used flexibly — when cognitive support, focus, or calm is desired. It does not require a strict every-day injection schedule.
