

# TB-500 (THYMOSIN BETA-4)

## Regenerative Peptide

Tissue Repair · Flexibility · Recovery

### What Is TB-500?

TB-500 is a synthetic version of Thymosin Beta-4, a naturally occurring peptide involved in cell migration, wound healing, and tissue regeneration.

### How It Works

|                                                                                        |                                                               |                                                                                 |
|----------------------------------------------------------------------------------------|---------------------------------------------------------------|---------------------------------------------------------------------------------|
| <b>Cell Migration</b><br>Promotes movement of cells to injury sites for faster repair. | <b>Angiogenesis</b><br>Stimulates new blood vessel formation. | <b>Anti-Fibrotic</b><br>Reduces scar tissue formation and improves flexibility. |
|----------------------------------------------------------------------------------------|---------------------------------------------------------------|---------------------------------------------------------------------------------|

### Areas of Research Interest

- Muscle, tendon, and ligament repair
- Faster wound healing
- Improved flexibility and range of motion
- Reduced inflammation
- Cardiovascular and neurological support

### Common Research Approaches

Subcutaneous injection, often near injury sites. Frequently stacked with BPC-157 in the “Wolverine Stack” for enhanced regeneration.
