

THYMOSIN ALPHA-1

Immune Modulator

Immune Support · Antiviral · Health Optimization

What Is Thymosin Alpha-1?

Thymosin Alpha-1 is a synthetic 28-amino acid peptide derived from thymosin fraction 5. It is a potent immune modulator researched for enhancing T-cell function and overall immune response.

How It Works

T-Cell Maturation	Immune Regulation	Antiviral Defense
Promotes differentiation and function of T-cells.	Balances innate and adaptive immunity, reduces inflammation.	Enhances response to viral infections and pathogens.

Areas of Research Interest

- Strengthened immune function
- Support against viral and bacterial infections
- Improved vaccine response
- Potential cancer adjuvant therapy
- Overall health and longevity support

Common Research Approaches

Subcutaneous injection in immune and infectious disease research. Often used in cycles for immune optimization.
