

TIRZEPATIDE

Dual GIP/GLP-1 Agonist

Weight Loss · Metabolic Health

What Is Tirzepatide?

Tirzepatide is a novel dual agonist peptide that targets both GIP and GLP-1 receptors. It is one of the most potent compounds researched for weight management and type 2 diabetes.

How It Works

GLP-1 Effects	GIP Effects	Synergistic Action
Reduces appetite, slows gastric emptying, improves insulin secretion.	Enhances insulin response and supports fat metabolism.	Leads to substantial weight loss and metabolic improvements.

Areas of Research Interest

- Significant weight loss (15–20%+ in studies)
- Improved glycemic control
- Reduced appetite and cravings
- Cardiovascular and metabolic benefits
- Body composition improvements

Common Research Approaches

Once-weekly subcutaneous injection. Researched extensively for obesity and diabetes with impressive efficacy data.

FOR RESEARCH PURPOSES ONLY · NOT FOR HUMAN CONSUMPTION
