

# SEMAX + SELANK

## Nasal Combo

Cognitive Enhancement · Anxiolytic Support · Neuroprotection

### What Is the Semax + Selank Nasal Combo?

The combination of **Semax** and **Selank** is a synergistic nootropic and anxiolytic peptide stack commonly researched for cognitive performance and stress resilience. Both peptides are frequently studied via **intranasal administration** for direct central nervous system delivery. Semax supports focus, memory, and neuroprotection, while Selank provides calming, anti-anxiety, and immune-modulating effects without sedation.

### How It Works

| Semax                                                                                                              | Selank                                                                                                                    | Synergy                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| Upregulates BDNF & NGF. Enhances focus, memory, learning, and neuroprotection against stress and oxidative damage. | Modulates GABA and immune cytokines. Reduces anxiety and stress while supporting cognitive clarity and emotional balance. | Together they deliver calm focus — improved mental performance with reduced anxiety and better stress resilience. |

### Areas of Research Interest

- Enhanced focus, memory, and cognitive performance
- Reduction of anxiety and stress without sedation
- Improved emotional resilience and mood balance
- Neuroprotection and support for BDNF pathways
- Immune modulation and recovery from mental fatigue

### Common Research Approaches

Primarily studied via **intranasal administration** for rapid CNS delivery. The combination is researched for nootropic, anxiolytic, and neuroprotective protocols. Often used in cycles focused on cognitive optimization and stress management.
