

RESEARCH ONE-PAGER

Selank + Semax Blend

10 mg · lyophilized · neurocognitive pathway research

OVERVIEW

A lyophilized combination of Selank (a synthetic tuftsin-derived heptapeptide) and Semax (a synthetic ACTH(4–10) analog). Researchers study the two together when an experimental design involves both neurocognitive signaling and stress-response pathways.

STUDIED IN THE LITERATURE FOR

Selank

Tuftsin analog · GABAergic / stress-pathway research

- Stress-response and anxiolytic-like signaling in research models
- Calm focus, attention, and working-memory tasks
- Enkephalin and GABAergic pathway activity
- Immune-modulating and cytokine-balance research
- Recovery from mental fatigue and exam-style cognitive load models

Semax

ACTH(4–10) analog · neurocognitive / BDNF research

- Learning, memory consolidation, and attention
- BDNF-associated neurotrophic signaling
- Neuroprotection and ischemia-recovery pathway research
- Mental stamina and cognitive-fatigue models
- Support of focus during high-demand cognitive tasks

WHY THEY ARE BLENDED

Selank is more often studied for stress-signaling and composure under load. Semax is more often studied for cognitive performance, neurotrophic signaling, and neuroprotection. The 10 mg blend lets a lab examine both directions in one preparation — composure plus cognitive signaling — rather than running the peptides only as separate vials.

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. Example for a 10 mg vial: 2 mL bacteriostatic water yields 5 mg/mL combined peptide. Confirm volume against the laboratory SOP. Aliquot if the design requires repeated sampling.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

These points summarize published research interests — they are not medical claims, and this material is not a treatment. It is not a drug or cosmetic, and it is not intended for human or veterinary use, consumption, or administration. HarmonyX supplies it to qualified research purchasers for laboratory and analytical work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
