

RESEARCH ONE-PAGER

KLOW

GHK-Cu + BPC-157 + TB-500 + KPV · 80 mg repair / dermal blend

80 mg lyophilized vials

OVERVIEW

KLOW is Glow plus TB-500. Four research lanes in one vial: collagen remodeling, tissue repair, transportation, and gut inflammation. It is HarmonyX's broadest tissue-repair blend.

IN PLAIN LANGUAGE

Think of KLOW as the full repair quartet. GHK-Cu for skin and collagen, BPC-157 for tissue repair, TB-500 as the transportation peptide, and KPV for reducing gut inflammation — where many health issues begin. People look at it when the research question is “repair, broadly,” not one tissue only.

WHAT RESEARCHERS LOOK AT

- Collagen and dermal remodeling (GHK-Cu)
- Tissue repair (BPC-157)
- Transportation of repair activity to the site (TB-500)
- Reducing gut inflammation, where many health issues begin (KPV)
- A four-lane blend so the bench is not running four separate vials

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water or the diluent specified in the laboratory SOP. Invert gently until dissolved; do not shake vigorously. Larger milligram vials need more diluent than a 10 mg peptide — confirm the volume for the vial on the bench before starting. Aliquot if the design requires repeated sampling. Offered as an 80 mg blend vial.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.
