

RESEARCH ONE-PAGER

5-Amino-1MQ

NNMT-pathway compound · metabolic research

10 mg and 50 mg vials

OVERVIEW

5-Amino-1MQ is a small-molecule research compound, not a peptide. It is studied against NNMT, an enzyme tied to how cells handle nicotinamide and energy storage.

IN PLAIN LANGUAGE

In everyday terms, people look at 5-Amino-1MQ when the question is “can we change how fat cells hold onto energy?” It shows up in metabolic and body-composition research, often next to NAD-related biology.

WHAT RESEARCHERS LOOK AT

- NNMT enzyme activity in fat-cell research models
- Energy-storage and metabolic-rate questions
- NAD-related biology (NNMT draws on the same neighborhood)
- Body-composition research alongside diet models
- A non-peptide option in a peptide-heavy metabolic shelf

LABORATORY RECONSTITUTION

Follow the laboratory SOP for this small-molecule compound. Do not assume peptide reconstitution volumes. Protect from moisture and confirm solvent with the bench protocol. Offered as 10 mg and 50 mg.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
