

RESEARCH ONE-PAGER

Adamax

Semax-family analog · neurocognitive research

10 mg lyophilized vials

OVERVIEW

Adamax is a Semax-family analog, studied as a more adamantane-modified cousin in the same neurocognitive neighborhood. The research questions are still thinking, focus, and neurotrophic signaling.

IN PLAIN LANGUAGE

In everyday terms, Adamax is looked at as a stronger-feeling Semax-family tool. People reach for it when the protocol already knows Semax and wants the next analog in that line.

WHAT RESEARCHERS LOOK AT

- Focus, attention, and working-memory research
- Neurotrophic / BDNF-adjacent signaling
- A Semax-family comparison compound
- Mental stamina in high-demand cognitive models
- Neurocognitive shelf alongside Semax and Selank

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
