

RESEARCH ONE-PAGER

CJC / Ipamorelin

GHRH analog + selective GH secretagogue · combination research

10 mg and 20 mg lyophilized vials

OVERVIEW

This vial pairs CJC-1295 (the longer GHRH signal) with Ipamorelin (the selective GH pulse). Researchers use the combination when they want both a knock on the door and someone holding it open.

IN PLAIN LANGUAGE

Think of CJC-1295 as “keep the GH axis engaged” and Ipamorelin as “send a clean pulse.” Together they are one of the most common GH-axis pairings in the research catalog — composure of the signal plus the pulse itself.

CJC-1295 — hold the signal

The longer GHRH conversation

- Extends how long the GH axis stays engaged
- Studied for GH amplitude over hours, not minutes
- Sleep and recovery-associated GH research
- Downstream IGF-1 signaling questions

Ipamorelin — send the pulse

The selective secretagogue

- A cleaner GH pulse than older GHRPs
- Less hunger and cortisol-signal noise
- Pairs with GHRH analogs in combination designs
- Overnight repair-style GH-axis models

TOGETHER

Used together, the blend is studied as a two-part GH-axis picture: a selective pulse on top of a longer GHRH signal. That is why HarmonyX offers it as one vial.

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg and 20 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.
