

RESEARCH ONE-PAGER

DSIP

Delta sleep-inducing peptide · sleep and circadian research

5 mg and 10 mg lyophilized vials

OVERVIEW

DSIP is studied for sleep architecture — the shape of a night, not just “knockout.” Circadian timing, deep-sleep questions, and stress-sleep overlap all show up in its literature.

IN PLAIN LANGUAGE

In everyday terms, DSIP is looked at as a “better night” peptide: settling into sleep, staying there, and the deep-sleep stretch that restoration research cares about. It is not a sedative in the pharmaceutical sense.

WHAT RESEARCHERS LOOK AT

- Sleep architecture and deep-sleep research
- Circadian-timing questions
- Stress-into-sleep models
- Restoration overnight, next to GH-axis sleep work
- A sleep-pathway peptide, not a tissue-repair peptide

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 5 mg and 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
