

RESEARCH ONE-PAGER

Selank

Tuftsins analog · stress-and-composure research

10 mg lyophilized vials

OVERVIEW

Selank is a tuftsins-derived heptapeptide. It is studied for how the system handles stress — GABAergic and enkephalin-related signaling — the “stay steady” peptide next to Semax.

IN PLAIN LANGUAGE

Think of Selank as composure under load. People look at it for a calmer stress response, steadier mood, and focus that does not feel wired. Pair it with Semax when the design wants both calm and sharpness.

WHAT RESEARCHERS LOOK AT

- A calmer response when stress is high
- Less “wired” feeling in anxiety-style research models
- Steadier mood and easier focus under pressure
- Working memory when the cognitive load is heavy
- Immune-balance research alongside the stress work

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
