

RESEARCH ONE-PAGER

Semax

ACTH(4–10) analog · neurocognitive research

10 mg lyophilized vials

OVERVIEW

Semax is a short ACTH-derived neuropeptide. It is studied for thinking, memory, attention, and the brain's own growth-signal (BDNF) — the “stay sharp” peptide in HarmonyX's neurocognitive shelf.

IN PLAIN LANGUAGE

In plain language, Semax is looked at as mental sharpness: clearer thinking, better attention, and more mental stamina when fatigue would normally set in. Pair it with Selank when the question is sharp and steady.

WHAT RESEARCHERS LOOK AT

- Clearer thinking, learning, and memory
- Attention during demanding tasks
- Mental energy when fatigue would normally set in
- BDNF-associated brain-support signaling
- Recovery-style research after cognitive or neural stress

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
