

RESEARCH ONE-PAGER

BPC-157

Gastric-derived peptide · tissue-repair research

10 mg lyophilized vials

OVERVIEW

BPC-157 is a fragment of a protein found in gastric juice. It is one of the most-studied research peptides for how tissue holds together and repairs — gut lining, tendon, ligament, and local blood-flow questions.

IN PLAIN LANGUAGE

Think of BPC-157 as the “help this tissue knit” peptide. People look at it for gut integrity, tendon and ligament research, and the small-vessel blood flow that repair depends on.

WHAT RESEARCHERS LOOK AT

- Gut-lining and GI-integrity research
- Tendon, ligament, and soft-tissue repair models
- Local blood-flow (angiogenesis-related) questions
- Inflammation-calming in injured-tissue models
- A core half of the Wolverine blend with TB-500

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
