

RESEARCH ONE-PAGER

Cagrilintide

Amylin analog · satiety-signaling research

10 mg lyophilized vials

OVERVIEW

Cagrilintide is an amylin-receptor research peptide. Amylin is the hormone that helps the brain and gut say “that’s enough.” It is often studied next to incretin peptides, not instead of them.

IN PLAIN LANGUAGE

Think of Cagrilintide as the “I’m full” signal from a different door than GLP-1. Researchers pair it with GLP-2X or GLP-3X when they want appetite biology from two directions at once.

WHAT RESEARCHERS LOOK AT

- Satiety and meal-size signaling
- Slowing of gastric-emptying research models
- A second appetite lever next to GLP-1 / GIP agonists
- Body-composition questions in combination designs
- Amylin-receptor biology without relying on a single incretin

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
