

RESEARCH ONE-PAGER

Glow

GHK-Cu + BPC-157 + KPV · 70 mg dermal / repair blend

70 mg lyophilized vials

OVERVIEW

Glow combines GHK-Cu (collagen and skin remodeling), BPC-157 (tissue knit), and KPV (inflammation calm). It is built for dermal and tissue-repair research that wants those three lanes in one vial.

IN PLAIN LANGUAGE

In everyday terms: GHK-Cu for how the tissue looks and remodels, BPC-157 for how it knits, KPV for how quiet the inflammation stays. That is the Glow picture — skin-and-repair, not a GH-axis peptide.

WHAT RESEARCHERS LOOK AT

- Skin remodeling and collagen-pathway research (GHK-Cu)
- Local tissue knit and integrity (BPC-157)
- Inflammation-calm in gut and dermal models (KPV)
- A three-lane alternative to running those vials separately
- Often compared with KLOW, which adds TB-500

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water or the diluent specified in the laboratory SOP. Invert gently until dissolved; do not shake vigorously. Larger milligram vials need more diluent than a 10 mg peptide — confirm the volume for the vial on the bench before starting. Aliquot if the design requires repeated sampling. Offered as a 70 mg blend vial.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
