

RESEARCH ONE-PAGER

Glutathione

Endogenous antioxidant · oxidative-stress research

500 mg, 600 mg, and 1500 mg vials

OVERVIEW

Glutathione is the body's own master antioxidant. Every cell makes it. Researchers use supplemental glutathione when the question is oxidative stress, liver-pathway load, or how tissue handles that "rust" of metabolism.

IN PLAIN LANGUAGE

Think of glutathione as the cell's cleanup crew. People look at it for brighter-feeling oxidative-stress research, liver-support models, and recovery after metabolic or environmental load.

WHAT RESEARCHERS LOOK AT

- Oxidative-stress and free-radical research
- Liver and detoxification-pathway models
- Immune-cell redox (the cell's internal "charge") questions
- Skin-brightness literature in dermal research
- A foundational antioxidant, not a receptor agonist

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water or the diluent specified in the laboratory SOP. Invert gently until dissolved; do not shake vigorously. Larger milligram vials need more diluent than a 10 mg peptide — confirm the volume for the vial on the bench before starting. Aliquot if the design requires repeated sampling. Offered as 500 mg, 600 mg, and 1500 mg. Confirm diluent volume for the vial on the bench.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
