

RESEARCH ONE-PAGER

KLOW

GHK-Cu + BPC-157 + TB-500 + KPV · 80 mg repair / dermal blend

80 mg lyophilized vials

OVERVIEW

KLOW is Glow plus TB-500. Four research lanes in one vial: collagen remodeling, local knit, cell migration, and inflammation calm. It is HarmonyX's broadest tissue-repair blend.

IN PLAIN LANGUAGE

Think of KLOW as the full repair quartet. GHK-Cu for skin and collagen, BPC-157 for knitting, TB-500 for getting cells to the site, KPV for turning the heat down. People look at it when the research question is "repair, broadly," not one tissue only.

WHAT RESEARCHERS LOOK AT

- Collagen and dermal remodeling (GHK-Cu)
- Local tissue integrity (BPC-157)
- Cell-migration and flexibility (TB-500)
- Inflammation-calm (KPV)
- A four-lane blend so the bench is not running four separate vials

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water or the diluent specified in the laboratory SOP. Invert gently until dissolved; do not shake vigorously. Larger milligram vials need more diluent than a 10 mg peptide — confirm the volume for the vial on the bench before starting. Aliquot if the design requires repeated sampling. Offered as an 80 mg blend vial.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.
