

RESEARCH ONE-PAGER

KPV

Alpha-MSH tripeptide · inflammatory-pathway research

10 mg lyophilized vials

OVERVIEW

KPV is a three-amino-acid piece of alpha-MSH. It is studied as a quiet, targeted anti-inflammatory signal — gut, skin, and immune-calming research without the pigment biology of full melanocortin peptides.

IN PLAIN LANGUAGE

In plain language, KPV is looked at as “turn the heat down” in inflamed tissue. People reach for it in gut-calm, skin-calm, and immune-balance research, and it is one of the pieces inside Glow and KLOW.

WHAT RESEARCHERS LOOK AT

- Gut-inflammation and barrier-calm research
- Skin-calm and dermal inflammatory models
- Immune-signaling without pigment effects
- A short, targeted anti-inflammatory fragment
- A building block of the Glow and KLOW blends

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
