

RESEARCH ONE-PAGER

Pinealon

Tripeptide bioregulator · neuronal / pineal research

10 mg lyophilized vials

OVERVIEW

Pinealon is a three-amino-acid bioregulator in the pineal family. It is studied for neuronal signaling, cognitive aging questions, and the same neighborhood as Epithalon with a more brain-forward brief.

IN PLAIN LANGUAGE

In plain language, Pinealon is looked at as a small “brain-and-pineal” signal. People reach for it in cognitive-aging and neuronal-protection research, often beside Epithalon.

WHAT RESEARCHERS LOOK AT

- Neuronal and cognitive-aging research
- Pineal-related signaling next to Epithalon
- Mental clarity questions in aging-biology models
- A short bioregulator, not a Semax-style nootropic analog
- Pairs conceptually with Epithalon on the aging shelf

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
