

RESEARCH ONE-PAGER

Thymosin Alpha-1

Thymic peptide · immune-signaling research

10 mg lyophilized vials

OVERVIEW

Thymosin Alpha-1 is a peptide from the thymus, the gland that schools T-cells. It is studied for immune intelligence — helping the system respond, then settle — in infection-adjacent and immune-balance research.

IN PLAIN LANGUAGE

Think of Thymosin Alpha-1 as an immune-coach peptide. People look at it when the question is “is the immune system sharp and balanced,” not simply “is inflammation high or low.”

WHAT RESEARCHERS LOOK AT

- T-cell and immune-education research
- Immune-balance after a challenge
- Infection-adjacent and vaccine-response literature
- A complement to KPV's inflammation-calm lane
- Thymic biology, not a GH-axis peptide

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. A common laboratory starting point is 2 mL bacteriostatic water per 10 mg of peptide (5 mg/mL). Match the volume to the vial on the bench and confirm against the laboratory SOP. Aliquot if the design requires repeated sampling. Offered as 10 mg lyophilized vials.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days with bacteriostatic water). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

The language above is a plain-English reading of published research interests. It is not medical advice and not a claim that this product treats, prevents, or diagnoses any condition. This material is not a drug or cosmetic, and it is not intended for human or veterinary use. HarmonyX supplies it to qualified research purchasers for laboratory work. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
