

RESEARCH ONE-PAGER

Selank + Semax Blend

10 mg · lyophilized · neurocognitive pathway research

OVERVIEW

A lyophilized combination of Selank (a synthetic tuftsin-derived heptapeptide) and Semax (a synthetic ACTH(4–10) analog) studied together in neurocognitive and stress-signaling research models. For laboratory and analytical research only.

THE TWO PEPTIDES

Selank is an analog of tuftsin (Thr-Lys-Pro-Arg-Pro-Gly-Pro). It is studied in the research literature for GABAergic signaling, enkephalin-related pathways, and stress-response models.

Semax is an analog of ACTH(4–10) (Met-Glu-His-Phe-Pro-Gly-Pro). It is studied for neurocognitive, BDNF-associated, and neuroprotective pathway research.

Researchers use the blend when an experimental design calls for both peptides in the same vial, so neurocognitive and stress-signaling questions can be examined together.

LABORATORY RECONSTITUTION

Reconstitute aseptically with bacteriostatic water. Invert gently until dissolved; do not shake vigorously. Example for a 10 mg vial: 2 mL bacteriostatic water yields 5 mg/mL combined peptide. Confirm the volume against the laboratory SOP before use. Aliquot if the design requires repeated sampling.

STORAGE

Lyophilized: refrigerate, protected from light and moisture. After reconstitution: refrigerate and follow laboratory SOP (commonly 14–30 days when bacteriostatic water is used). Avoid repeated freeze–thaw cycles.

RESEARCH USE ONLY

This material is not a drug, not a cosmetic, and is not intended for human or veterinary use, consumption, or administration. HarmonyX supplies it solely to qualified research purchasers for laboratory, analytical, or in-vitro investigation. Certificates of analysis are available on request.

Questions on this vial? Paul and Thabby review every request.
