EIGHT-WEEK SCHEDULE

Protocol for Myron

October 12, 2026 – December 6, 2026

U-100 insulin syringe only. On that syringe, 100 units = 1 mL. Week 1 is the first day he doses. NAD+ stays every other day for the whole cycle. The first two weeks he can skip an NAD+ day if he does not need it. Do not take two NAD+ doses on the same day to make up for a skip.

COMPOUND 1

SS-31 50 mg

MIX	2 mL bacteriostatic water
STRENGTH	25 mg per mL
EACH UNIT	0.25 mg
WEEKS 1–2	10 units daily · 2.5 mg
WEEKS 3–8	20 units daily · 5 mg
DRAWN	245 mg · 9.8 mL
VIALS	5 vials

New SS-31 vial on Oct 12, Oct 29, Nov 8, Nov 18, and Nov 28.

COMPOUND 2

NAD+ 500 mg

MIX	4 mL bacteriostatic water
STRENGTH	125 mg per mL
EACH UNIT	1.25 mg
WEEKS 1–2	30 units every other day
PER DOSE	37.5 mg
WEEKS 3–8	40 units every other day
PER DOSE	50 mg
DRAWN	1,312.5 mg · 10.5 mL
VIALS	3 vials

New NAD+ vial on Oct 12, Nov 3, and Nov 23. About 30 units will be left in vial 1 after Nov 1. That is short of a 40-unit dose, so Nov 3 comes from a new vial.

How to mix and store

- Let the vial and the bacteriostatic water sit until they are at room temperature. Wipe the stoppers.
- Push the water in slowly, down the glass, not onto the powder. Swirl gently until clear. Do not shake.
- Label each vial with the compound, the mix date, and the concentration. Refrigerate. Keep out of light.
- Use a fresh syringe for every draw. Do not put a used syringe back into the vial.
- SS-31 is every day, including NAD+ days. NAD+ is every other day, starting October 12, then the 14th, 16th, and so on.
- Bacteriostatic water for the full cycle is 22 mL: 2 mL in each of 5 SS-31 vials, and 4 mL in each of 3 NAD+ vials.
- If he starts on a day other than October 12, slide the whole calendar by the same number of days. The order does not change.
